**Child Imaging Safety**

The WFPI was invited to participate in two World Health Organization (WHO) meetings on radiation safety in Geneva, September 2013. An Expert Meeting on Radiation Risk Communication in Pediatric Imaging was convened to review and revise a draft tool to communicate on radiation risks and the benefits of pediatric imaging procedures and agree on the next steps to complete the document. This was followed by an International Consultation on the Global Initiative on Radiation Safety in Health Care.

A Global Summit on Radiological Quality and Safety (GSRQS) took place in Washington DC, May 2013. Over 50 representatives from societies around the world attended; Dr. Dorothy Bulas represented both the World Federation for Ultrasound in Medicine and Biology and the WFPI.

**Click here** to read about the meetings and the joint statement delivered by Donald Frush, MD, at WHO on behalf of Image Gently and the WFPI.

**Ultrasound**

With ultrasound as a major initiative in developing countries, the GSRQS stressed the critical need for education and quality initiatives in ultrasound. Who performs the ultrasound exams, who interprets them and who teaches scanning techniques all require a commonality of quality and safety globally. These discussions reminded all that while overutilization was an issue at the Summit, underutilization cannot be ignored. A new ultrasound WFPI research concept is currently being developed by a group from the United States and South Africa – more details coming soon.

**Education**

SPR 2013 in San Antonio hosted an international educational forum chaired by WFPI’s Education leader Dorothy Bulas, MD. The forum explored international pediatric health, the benefits & challenges of webinar distance learning and the issues at stake in pediatric imaging outreach in Africa today. The panel included Savvas Andronikou, MD (South Africa), Timothy Cain, MD (Australia), Kassa Darge, MD (US), Celia Ferrari, MD (Argentina), Bernard Laya, MD (Philippines) and Kieran McHugh, MD (UK).

**WHO pneumonia vaccines**

Radiologically-confirmed pneumonia is the end point for the WHO’s trials on the efficacy and impact of the pneumococcal conjugate vaccine (PCV).

The WHO invited organizations currently involved in the PCV trials to a meeting in Geneva, September 2013 ([click here](#)). The WFPI was invited to present both its mission and work to date as an advocate for pediatric imaging.

The WFPI wishes to contribute to the improvement of image quality and the consistency of interpretation of chest X-rays performed in these trials; the move from analogue to digital imaging and inter-and intra-observer variation need priority attention. It is hoped that the physicians present from the WHO, CDC Atlanta, John Hopkins, the London School of Hygiene and Tropical Medicine and other leading medical institutions around the world are now aware of the availability of a global organization of pediatric radiologists willing to assist with future efforts.

While our role and contribution are yet to be determined, we view this as an exciting opportunity for the WFPI to contribute on a global stage via the WHO.

**ACR-WFPI Haiti:**  *See the video* of the basic pediatric imaging course delivered in Port-au-Prince, May 2013

We enjoy sharing our Member Organizations’ work. Click here for a recent trip to Palestine carried out by Aaidil Ahmed, MD, SASPI/WFPI. Contact **WFPI Office** if your organization has projects we could profile.

**MSF** collaboration continues in Cambodia, Tajikistan, Central and Sub-Saharan Africa. A quality assessment of tele-reading (article co-authored by MSF-WFPI due for publication soon) has confirmed the significant impact digital equipment has on quality. The findings of this work will impact on site selection for volunteer tele-reading and is a catalyst for the WFPI to promote digital equipment acquisition to potential donors.

**WFPI in South Africa August 2013**

This August, Drs. Dorothy Bulas, Kassa Darge (image right) and Carol Barnewolt were invited to give over 26 lectures on ultrasound topics from head to MSK including fetal during a course on neonatal US and imaging during the Society of Radiographers of South Africa and the Radiological Society of South Africa 2013 meeting in Durban. In addition, under the guidance of WFPI outreach leader Prof. Savvas Andronikou, several visiting professorships were arranged to teach, talk about WFPI and learn about outreach issues.
