

WFPI at a glance

WFPI= World Federation of Pediatric Imaging

What do we do?

We provide a united platform for pediatric radiology organizations looking to address global challenges in pediatric imaging.

From WHO - 4 billion people live with widespread losses/deaths that could have been avoided or treated, if radiology had been available. 1 billion are children.

How do we do it?

Led by representatives of the 5 regional societies: AfSPI (Africa), AOSPR (Asia-Oceania), ESPR (Europe), SLARP (Latin America), and SPR (North America) we volunteer local/regional pediatric imaging expertise needed in ongoing general outreach and educational projects.

We "bolt on." Our initiatives focus on teaching, outreach and forging partnerships with successful organizations offering our community's expertise to enhance their ongoing efforts.

Goals

The promotion of standards of pediatric imaging and image-guided intervention for the benefit of child health worldwide.

The advancement of internationally-driven education and/or research in pediatric imaging and image-guided intervention.

- The encouragement of global child imaging safety and radiation protection
- The stimulation of resource allocation for pediatric imaging and image-guided intervention, with a focus on areas of acute need.
- The fostering of opportunities for communication and collaboration between pediatric imaging practitioners across nations.
- Collaboration with other global health organizations for the dissemination of best practices in pediatric imaging and pediatric image-guided intervention and appropriate imaging guidelines.
